NEW QUESTION: 4

You need to use Azure Automation State Configuration to manage the ongoing consistency of virtual machine configurations. Which five actions should you perform in sequence? To answer, move the appropriate action from the list of actions to the answer area and arrange them in the correct order.
NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

Answer:

Explanation:

Explanation

- Step 1: Upload a configuration to Azure Automation State Configuration.
Import the configuration into the Automation account.
- Step 2: Compile a configuration into a node configuration.
A DSC configuration defining that state must be compiled into one or more node configurations (MOF document), and placed on the Automation DSC Pull Server.
- Step 3: Onboard the virtual machines to Azure Automation State Configuration.

Onboard the Azure VM for management with Azure Automation State Configuration Step 4: Assign the node configuration Step 5: Check the compliance status of the node Each time Azure Automation State Configuration performs a consistency check on a managed node, the node sends a status report back to the pull server. You can view these reports on the page for that node. On the blade for an individual report, you can see the following status information for the corresponding consistency check:

The report status - whether the node is "Compliant", the configuration "Failed", or the node is "Not Compliant"
