- A. Change the Membership type of Group1 to Dynamic User.
- B. Create an access review.
- C. Implement Azure AD Privileged Identity Management.
- D. Implement Azure AD Identity Protection.

Answer: A

Explanation:

Explanation

In Azure Active Directory (Azure AD), you can create complex attribute-based rules to enable dynamic memberships for groups. Dynamic group membership reduces the administrative overhead of adding and removing users.

When any attributes of a user or device change, the system evaluates all dynamic group rules in a directory to see if the change would trigger any group adds or removes. If a user or device satisfies a rule on a group, they are added as a member of that group. If they no longer satisfy the rule, they are removed.
