NEW QUESTION: 1
Your network contains an Active Directory domain named contoso.com. The domain contains the file servers shown in the following table.

A file named File1.abc is stored on Server1. A file named File2.abc is stored on Server2. Three apps named App1, App2, and App3 all open files that have the .abc file extension.
You implement Windows Information Protection (WIP) by using the following configurations:
* Exempt apps: App2
* Protected apps: App1
* Windows Information Protection mode: Block
* Network boundary: IPv4 range of: 192.168.1.1-192.168-1.255
You need to identify the apps from which you can open File1.abc.
For each of the following statements, select Yes if the

statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

NEW QUESTION: 2
You work as a database administrator at ABC.com. ABC.com makes
use of SQL Server 2000 instance.
A current specific job is configured to retrieve a file
remotely from a shared network folder via a CMDExec
step. The use of the LocalSystem account has been configured
for the SQL Server Agent service.
You receive an instruction to upgrade the current SQL Server
instance to SQL Server 2008 R2.
Subsequent to the upgrade, you notice that the job step is
unable to finish its process.
It is imperative that this issue be rectified.
Which of the following actions should you take?
A. You should consider reconfiguring the job step to make use
of a Local Service account.
B. You should consider reconfiguring the job step to make use
of a Domain account.
C. You should consider reconfiguring the job step to make use
of a proxy account.
D. You should consider reconfiguring the job step to make use
of a remote System account.
Answer: C

NEW QUESTION: 3
Match the Azure service to the correct description.
Instructions: To answer, drag the appropriate Azure service
from the column on the left to its description on the right.
Each service may be used once, more than once, or not at all
NOTE: Each correct match is worth one point.
