**NEW QUESTION: 1**
You have an application running on an EC2 Instance which will allow users to download files from a private S3 bucket using a pre-assigned URL. Before generating the URL the application should verify the existence of the file in S3.
How should the application use AWS credentials to access the S3 bucket securely?
**A.** Create an IAM user for the application with permissions that allow list access to the S3 bucket. The application retrieves the IAM user credentials from a temporary directory with permissions that allow read access only to the application user.
**B.** Create an IAM user for the application with permissions that allow list access to the S3 bucket launch the instance as the IAM user and retrieve the IAM user's credentials from the EC2 instance user data.

**C.** Use the AWS account access Keys the application retrieves the credentials from the source code of the application.
**D.** Create an IAM role for EC2 that allows list access to objects in the S3 bucket. Launch the instance with the role, and retrieve the role's credentials from the EC2 Instance metadata

**NEW QUESTION: 2**
Security administrators attempted corrective action after a phishing attack. Users are still experiencing trouble logging in, as well as an increase in account lockouts. Users' email contacts are complaining of an increase in spam and social networking requests. Due to the large number of affected accounts, remediation must be accomplished quickly. Which of the following actions should be taken FIRST? (Select TWO)
**A.** Change the compromised accounts' passwords
**B.** Update WAF rules to block social networks
**C.** Disable the open relay on the email server
**D.** Remove the compromised accounts with all AD groups
**E.** Disable the compromised accounts
**F.** Enable sender policy framework
**Answer: C,F**
Explanation:
Sender Policy Framework (SPF) is a simple email-validation system designed to detect email spoofing by providing a mechanism to allow receiving mail exchangers to check that incoming mail from a domain comes from a host authorized by that domain's administrators.
n a Small Business Server environment, you may have to prevent your Microsoft Exchange Server-based server from being used as an open relay SMTP server for unsolicited commercial e-mail messages, or spam.
You may also have to clean up the Exchange server's SMTP queues to delete the unsolicited commercial e- mail messages. If your Exchange server is being used as an open SMTP relay, you may experience one or more of the following symptoms:
- The Exchange server cannot deliver outbound SMTP mail to a growing list of e-mail domains.
- Internet browsing is slow from the server and from local area network (LAN) clients.
- Free disk space on the Exchange server in the location of the Exchange information store databases or the Exchange information store transaction logs is reduced more rapidly than you expect.
- The Microsoft Exchange information store databases

spontaneously dismount. You may be able to manually mount the stores by using Exchange System Manager, but the stores may dismount on their own after they run for a short time. For more information, click the following article number to view the article in the Microsoft Knowledge Base:

**NEW QUESTION: 3**
The risk manager at a small bank wants to use quantitative analysis to determine the ALE of running a business system at a location which is subject to fires during the year. A risk analyst reports to the risk manager that the asset value of the business system is $120,000 and, based on industry data, the exposure factor to fires is only 20% due to the fire suppression system installed at the site. Fires occur in the area on average every four years. Which of the following is the ALE?
**A.** $96,000
**B.** $30,000
**C.** $6,000
**D.** $24,000
**Answer: C**
Explanation:
Single Loss Expectancy (SLE) is mathematically expressed as:
Asset value (AV) x Exposure Factor (EF) SLE = AV x EF = $120 000 x 20% = $ 24,000 (this is over 4 years) Thus ALE = $ 24,000 / 4 = $ 6,000 References:
