Drag and drop each statement about cisco EEM policies on the left to the right

**Answer:**

Explanation:

**NEW QUESTION: 3**

You are adding a new EX4300 member switch to your existing EX4300 Virtual Chassis.

However, the new member is not running the same Junos version as the other members.

By default, what is the expected behavior?

- A.** The new switch will be assigned a member ID and then placed in an inactive state.
- B.** The new switch is not recognized by the Virtual Chassis.
- C.** The new switch will automatically pull the correct version from the master Routing Engine and perform the necessary upgrade.
- D.** The Virtual Chassis will transition into a split brain situation between the existing master Routing Engine and the switch running the different version.

**Answer: C**

Explanation:

You can use the automatic software update feature to automatically update the Juniper Networks Junos operating system (Junos OS) version on prospective member switches as you add them to an EX Series or QFX Series Virtual Chassis. When you have configured automatic software update on a Virtual Chassis, the Junos OS version is updated on the new member switch when you add it to the Virtual Chassis. The new member switch immediately joins the Virtual Chassis configuration and is put in the active state.
