If you are looking to get Google by passing exam Professional-Cloud-Architect then you can pass it in one go, Can be carried along and makes every second useful, You will never study with aimless and waste much time on useless and inefficient practice.

Now we have PDF version, windows software and online engine of the Professional-Cloud-Architect certification materials, Our experts and staff have always attached great importance to every aspect of our Professional-Cloud-Architect training guide materials carefully.

Pdf version- it is legible to read and remember, and support customers'™ printing request, so you can have a print and practice in papers, Professional-Cloud-Architect exam dumps are very important when it comes to the preparation of certification exam.

We also hire dedicated staff to continuously update our question bank daily, so no matter when you buy Professional-Cloud-Architect guide torrent, what you learn is

the most advanced.

Many companies are cutting off workers, so it is of vital importance to achieve the Google Professional-Cloud-Architect certification.

NEW QUESTION: 1

A company's legacy application is currently relying on a single-instance Amazon RDS MySQL database without encryption. Due to new compliance requirements, all existing and new data in this database must be encrypted. How should this be accomplished?

- A.** Create an RDS read replica with encryption at rest enabled. Promote the read replica to master and switch the application over to the new master. Delete the old RDS instance.
- B.** Create an Amazon S3 bucket with server-side encryption enabled. Move all the data to Amazon S3. Delete the RDS instance.
- C.** Enable RDS Multi-AZ mode with encryption at rest enabled. Perform a failover to the standby instance to delete the original instance.
- D.** Take a snapshot of the RDS instance. Create an encrypted copy of the snapshot. Restore the RDS instance from the encrypted snapshot.

Answer: D

Explanation:

How do I encrypt Amazon RDS snapshots?

The following steps are applicable to Amazon RDS for MySQL, Oracle, SQL Server, PostgreSQL, or MariaDB.

Important: If you use Amazon Aurora, you can restore an unencrypted Aurora DB cluster snapshot to an encrypted Aurora DB cluster if you specify an AWS Key Management Service (AWS KMS) encryption key when you restore from the unencrypted DB cluster snapshot. For more information, see [Limitations of Amazon RDS Encrypted DB Instances](#).

Open the Amazon RDS console, and then choose Snapshots from the navigation pane.

Select the snapshot that you want to encrypt.

Under Snapshot Actions, choose Copy Snapshot.

Choose your Destination Region, and then enter your New DB Snapshot Identifier.

Change Enable Encryption to Yes.

Select your Master Key from the list, and then choose Copy Snapshot.

After the snapshot status is available, the Encrypted field will be True to indicate that the snapshot is encrypted.

You now have an encrypted snapshot of your DB. You can use this encrypted DB snapshot to restore the DB instance from the DB snapshot.

NEW QUESTION: 2

What should the technical specialist explain when describing the addition of grid elements to an IBM FlashSystem A9000R?

- A. Element interface options must be the same type.
- B. Up to 12 MicroLatency modules can be attached to a grid element.
- C. Six elements must be grown to nine elements initially.
- D. MicroLatency module size can be intermixed.

Answer: A

Explanation:

Grid elements installed must all be the same type (interface options and MicroLatency module size). An intermix of interface options or MicroLatency module capacities is not supported.

Note: Two grid controllers and one flash enclosure are combined to make one grid element.

Capacity, caching, and processing power are added at the same time by adding in one or more grid elements to scale up.

IBM Flash System A9000R consists of 2 - 6 grid elements, where a partially populated rack

(2 - 5 grid elements) is expanded by adding grid elements to the maximum number of six- grid elements.

NEW QUESTION: 3

You have an Azure subscription named Subscription1 that contains the following resource group:

- * Name: RG1
- * Region: West US
- * Tag: "tag1": "value1"

You assign an Azure policy named Policy1 to Subscription1 by using the following configurations:

- * Exclusions: None
- * Policy definition: Append tag and its default value
- * Assignment name: Policy1
- * Parameters:
 - Tag name: Tag2
 - Tag value: Value2

After Policy1 is assigned, you create a storage account that has the following configurations:

- * Name: storagel
- * Location: West US
- * Resource group: RG1
- * Tags: "tag3": "value3"

You need to identify which tags are assigned to each resource. What should you identify? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: "tag1": "value1" only

Box 2: "tag2": "value2" and "tag3": "value3"

Tags applied to the resource group are not inherited by the resources in that resource group.

NEW QUESTION: 4

In a SQLScript calculation view, one table variable contains the records that are the result of a SELECT * statement from a database table with 10 fields. You want to use this table variable to populate a new table variable with the same result set, which is restricted to 1 of the 10 fields.

Which CE function do you use?

- A. CE_COLUMN_TABLE
- B. CE_UNION
- C. CE_PROJECTION
- D. CE_CALC

Answer: C
