NEW QUESTION: 2
Refer to the exhibit.

Which statement is correct?

A. OSPF peers are using Type 1 authentication
B. The OSPF peer IP address is 172.16.10.36
C. Authentication is used, but there is a password mismatch
D. OSPF peers are using Type 2 authentication
Answer: D
Explanation:
These are the three different types of authentication supported by OSPF.
Null Authentication-This is also called Type 0 and it means no authentication information
is included in the packet header. It is the default.
Plain Text Authentication-This is also called Type 1 and it uses simple clear-text
passwords.
MD5 Authentication-This is also called Type 2 and it uses MD5 cryptographic passwords.
Authentication does not need to be set. However, if it is set, all peer routers on the same
segment must have the same password and authentication method. The examples in this
document demonstrate configurations for both plain text and MD5 authentication.
