NEW QUESTION: 1

SIMULATION

A. Check the part below:

```
Always remember the Process id and area , in this question
process id is 37 and OSPF area is 23 Process id 37 area 23
Indianapoll at first go to HOST A and write this configuration
Seattle(config)#router ospf 37 Seattle (config-router)#network
192.168.3.4 0.0.0.3 area 23 Seattle (config-router)#area 23
stub For Host B Indianapoll #configure terminal Indianapoll
(config)#router ospf 37 Indianapoll (config-router)#network
192.168.3.4 0.0.0.3 area 23 Indianapoll (config-router)#area 23
stub no-summary
```

B. Check the part below:

Always remember the Process id and area , in this question process id is 37 and OSPF area is 23
Process id 37 area 23
Indianapolis at first go to HOST A and write this configuration
Seattle(config)#router ospf 37 Seattle (config-router)#network 192.168.3.4 0.0.0.3 area 23
Seattle (config-router)#area 23 stub
For Host B Indianapolis #configure terminal Indianapolis (config)#router ospf 37 Indianapolis (config-router)#network 192.168.3.4 0.0.0.3 area 23 Indianapolis (config-router)#area 23 stub no-summary

Show ip route in host A

To verify the lab 0* this one should be there.

Answer: B

NEW QUESTION: 2

- A.** Virtual Cloud Network must be configured with an internet gateway.
- B.** Virtual Cloud Network must be configured with dynamic routing gateway.
- C.** Availability and durability of the backup is high.
- D.** Availability is low but the durability of the backup is high.
- E.** Availability is high but the durability of the backup is low.

Answer: A,D

NEW QUESTION: 3

Scenario: A company is migrating its data to Azure Storage. The company has a large amount of data and wants to ensure that the data is secure and available. The company is considering using Azure Storage for its data. The company is also considering using Azure Key Vault for its secrets. The company is also considering using Azure Active Directory for its identity management. The company is also considering using Azure Monitor for its monitoring and logging. The company is also considering using Azure Policy for its governance. The company is also considering using Azure Security Center for its security. The company is also considering using Azure Backup for its backup and recovery. The company is also considering using Azure Site Recovery for its disaster recovery. The company is also considering using Azure DevOps for its CI/CD. The company is also considering using Azure IoT Hub for its IoT. The company is also considering using Azure Databricks for its data lake. The company is also considering using Azure HDInsight for its Hadoop. The company is also considering using Azure ML for its machine learning. The company is also considering using Azure Cognitive Services for its AI. The company is also considering using Azure Cosmos DB for its NoSQL. The company is also considering using Azure SQL Database for its relational database. The company is also considering using Azure Data Lake Storage for its data lake. The company is also considering using Azure Data Lake Analytics for its data lake analytics. The company is also considering using Azure Data Factory for its data integration. The company is also considering using Azure Stream Analytics for its stream processing. The company is also considering using Azure Event Hubs for its event processing. The company is also considering using Azure Service Bus for its messaging. The company is also considering using Azure Logic Apps for its workflow automation. The company is also considering using Azure Functions for its serverless computing. The company is also considering using Azure App Service for its web hosting. The company is also considering using Azure Kubernetes Service for its container management. The company is also considering using Azure Container Instances for its container management. The company is also considering using Azure Container Registry for its container registry. The company is also considering using Azure Container Apps for its container management. The company is also considering using Azure Service Fabric for its distributed applications. The company is also considering using Azure Batch for its batch processing. The company is also considering using Azure HDInsight for its Hadoop. The company is also considering using Azure ML for its machine learning. The company is also considering using Azure Cognitive Services for its AI. The company is also considering using Azure Cosmos DB for its NoSQL. The company is also considering using Azure SQL Database for its relational database. The company is also considering using Azure Data Lake Storage for its data lake. The company is also considering using Azure Data Lake Analytics for its data lake analytics. The company is also considering using Azure Data Factory for its data integration. The company is also considering using Azure Stream Analytics for its stream processing. The company is also considering using Azure Event Hubs for its event processing. The company is also considering using Azure Service Bus for its messaging. The company is also considering using Azure Logic Apps for its workflow automation. The company is also considering using Azure Functions for its serverless computing. The company is also considering using Azure App Service for its web hosting. The company is also considering using Azure Kubernetes Service for its container management. The company is also considering using Azure Container Instances for its container management. The company is also considering using Azure Container Registry for its container registry. The company is also considering using Azure Container Apps for its container management. The company is also considering using Azure Service Fabric for its distributed applications. The company is also considering using Azure Batch for its batch processing.

Answer:

Explanation:

Explanation

Account Kind: StorageV2 (general-purpose v2)
Scenario: Azure Storage blob will be used (refer to the exhibit). Data storage costs must be minimized.

General-purpose v2 accounts: Basic storage account type for blobs, files, queues, and tables. Recommended for most scenarios using Azure Storage.

Reference:

<https://docs.microsoft.com/en-us/azure/storage/common/storage-account-overview>

<https://docs.microsoft.com/en-us/azure/storage/common/storage-redundancy>

<https://docs.microsoft.com/en-us/azure/storage/blobs/storage-blob-storage-tiers?tabs=azure-portal>

NEW QUESTION: 4

What is the most common cause for a Quick mode packet 1 failing with the error "No Proposal Chosen" error?

- A. The encryption strength and hash settings of one peer does not match the other.
- B. There is a network connectivity issue.
- C. The OS and patch level of one gateway does not match the other.
- D. The previously established Permanent Tunnel has failed.

Answer: A
