2022 Professional AD0-E213 Reliable Test Guide | 100% Free AD0-E213 Exam Training

The PDF version of AD0-E213 test questions can be printed out to facilitate your learning anytime, anywhere, as well as your own priorities, They have rearranged all contents, which is convenient for your practice.

Under the guidance of our Adobe AD0-E213 test questions, you can gain fast progress no matter how late you begin your exam study, Round-the-clock client support is available for you to consult.

If you want to pass the AD0-E213 exam, you should buy our AD0-E213 exam questions to prepare for it, If you don't want to waste too much time and energy on the exam preparation, our certification guide for AD0-E213 - Adobe Analytics Developer Professional exam will be your right choice.

Desirable outcomes, We guarantee all people can pass exam if you pay attention on our Adobe AD0-E213 braindumps pdf, If you put just a bit of extra effort, you can score the highest possible score in the real Adobe Certified Technician certification because our AD0-E213 dumps are designed for the best results. AD0-E213 Practice Exam Software Start learning the futuristic way.

NEW QUESTION: 1

The airport needs to support several different SSIDs, including:

- * four for individual airlines
- * one for the airport as a whole
- * one for airport security

The airport security traffic must terminate on different mobility controllers (MCs) from the rest of the airport traffic and be managed entirely separately. Airlines also want to terminate traffic at their MCs.

The airport MCs and airport security MCs require redundancy while airlines do not.

Which plan for MCs and Mobility Master (MM) meets the needs of this scenario?

- A.** one MCs for the airport, one MC for airport security, and one MC for each of the four airlines with its own SSID, all controlled by the same MM
- B.** one MCs for the airport, a cluster of MCs for airport

security controlled by a pair of MMs, and one MC for each of the four airlines

C. a cluster of MCs for the airport, a cluster of MCs for airport security, and one MC for each of four airlines, all controlled by the same MM pair

D. a cluster of MCs for the airport controlled by an MM pair, a cluster of MCs for airport security controlled by a different MM pair, and one standalone MC for each of the four airlines.

Answer: D

NEW QUESTION: 2

Auto Scaling is used to manage the capacity of your Amazon EC2 instances. You have a fleet of EC2 instances that are used to process data. The instances are distributed across four Availability Zones. You want to ensure that your fleet is always available and that you can scale the fleet up or down as needed. Which of the following configurations meets these requirements?

A. You create a single Availability Zone with four EC2 instances. You use Auto Scaling to manage the capacity of the instances. You set the instance type to t2.micro and the instance profile to AmazonEC2RoleforSSMAutoScaling. You set the scaling policy to use the default scaling policy.

B. You create a single Availability Zone with four EC2 instances. You use Auto Scaling to manage the capacity of the instances. You set the instance type to t2.micro and the instance profile to AmazonEC2RoleforSSMAutoScaling. You set the scaling policy to use the default scaling policy. You set the health check to use the default health check.

C. You create a single Availability Zone with four EC2 instances. You use Auto Scaling to manage the capacity of the instances. You set the instance type to t2.micro and the instance profile to AmazonEC2RoleforSSMAutoScaling. You set the scaling policy to use the default scaling policy. You set the health check to use the default health check. You set the replacement strategy to Default.

D. You create a single Availability Zone with four EC2 instances. You use Auto Scaling to manage the capacity of the instances. You set the instance type to t2.micro and the instance profile to AmazonEC2RoleforSSMAutoScaling. You set the scaling policy to use the default scaling policy. You set the health check to use the default health check. You set the replacement strategy to Default. You set the termination protection to true.

E. You create a single Availability Zone with four EC2 instances. You use Auto Scaling to manage the capacity of the instances. You set the instance type to t2.micro and the instance profile to AmazonEC2RoleforSSMAutoScaling. You set the scaling policy to use the default scaling policy. You set the health check to use the default health check. You set the replacement strategy to Default. You set the termination protection to true. You set the maximum number of instances to 4.

Answer: A

Explanation:

Auto Scaling is used to manage the capacity of your Amazon EC2 instances. You have a fleet of EC2 instances that are used to process data. The instances are distributed across four Availability Zones. You want to ensure that your fleet is always available and that you can scale the fleet up or down as needed. Which of the following configurations meets these requirements?

A. You create a single Availability Zone with four EC2 instances. You use Auto Scaling to manage the capacity of the instances. You set the instance type to t2.micro and the instance profile to AmazonEC2RoleforSSMAutoScaling. You set the scaling policy to use the default scaling policy.

B. You create a single Availability Zone with four EC2 instances. You use Auto Scaling to manage the capacity of the instances. You set the instance type to t2.micro and the instance profile to AmazonEC2RoleforSSMAutoScaling. You set the scaling policy to use the default scaling policy. You set the health check to use the default health check.

C. You create a single Availability Zone with four EC2 instances. You use Auto Scaling to manage the capacity of the instances. You set the instance type to t2.micro and the instance profile to AmazonEC2RoleforSSMAutoScaling. You set the scaling policy to use the default scaling policy. You set the health check to use the default health check. You set the replacement strategy to Default.

D. You create a single Availability Zone with four EC2 instances. You use Auto Scaling to manage the capacity of the instances. You set the instance type to t2.micro and the instance profile to AmazonEC2RoleforSSMAutoScaling. You set the scaling policy to use the default scaling policy. You set the health check to use the default health check. You set the replacement strategy to Default. You set the termination protection to true.

E. You create a single Availability Zone with four EC2 instances. You use Auto Scaling to manage the capacity of the instances. You set the instance type to t2.micro and the instance profile to AmazonEC2RoleforSSMAutoScaling. You set the scaling policy to use the default scaling policy. You set the health check to use the default health check. You set the replacement strategy to Default. You set the termination protection to true. You set the maximum number of instances to 4.
