**NEW QUESTION: 1**

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains the Active Directory forests and domains shown in the following table:

A two-way forest trust exists between ForestA and ForestB. Each domain in ForestB contains user accounts that are used to manage servers.

You need to ensure that the user accounts used to manage the servers in ForestB are members of the Server Operators in ForestA.

Solution: In each domain in ForestB, you create a global group that contains the user accounts of the respective domain. You create a universal group in DomainBRoot. You add the new global groups to the new universal group. You modify the membership of the Server Operators in ForestA.

Does this meet the goal?

A. No

B. Yes

**Answer: B**

Explanation:
