**NEW QUESTION: 1**

DRAG DROP

**Answer:**

Explanation:

Explanation:

The requirements set out in this question are:

We use the Set-CsMeetingConfiguration cmdlet to modify the meeting (also called conferences) configuration settings for meetings configured in Lync.

The Set-CsMeetingConfiguration cmdlet without any parameters to filter the list of meetings will modify the settings on all meetings in the organization.

The LegalURL parameter enables you to provide a URL to a website containing legal information and meeting disclaimers.

In this question, the URL is

"www.contoso.com/disclaimer.html". This meets the legal disclaimer requirement set out in the question.

The CustomFooterText parameter enables you to specify text to be added to the end of custom meeting invitations. In this question, we add the text "This meeting may be recorded" to the invitations to meet the second requirement.

## **NEW QUESTION: 2**

You are developing an ASP.NET MVC application that uses forms authentication. The application uses SQL queries that display customer order data.

Logs show there have been several malicious attacks against the servers.

You need to prevent all SQL injection attacks from malicious users against the application.

How should you secure the queries?

- A.** Check the input against patterns seen in the logs and other records.
- B.** Filter out prohibited words in the input submitted by the users.
- C.** Escape single quotes and apostrophes on all string-based input parameters.
- D.** Implement parameterization of all input strings.

**Answer: D**

Explanation:

Explanation

SQL Injection Prevention, Defense Option 1: Prepared Statements (Parameterized Queries) The use of prepared statements (aka parameterized queries) is how all developers should first be taught how to write database queries. They are simple to write, and easier to understand than dynamic queries. Parameterized queries force the developer to first define all the SQL code, and then pass in each parameter to the query later.

This coding style allows the database to distinguish between code and data, regardless of what user input is supplied.

Prepared statements ensure that an attacker is not able to change the intent of a query, even if SQL commands are inserted by an attacker.

**NEW QUESTION: 3**

A project is in its closing phase After confirming that deliverables have been accepted, the project manager realizes that a third-party contract is pending closure due to an open claim What should the project manager do next?

- A. Update the lessons learned repository with this issue
- B. Negotiate and resolve the issue before dosing the project.
- C. Close the project since the deliverables have been accepted
- D. Update the procurement management plan

**Answer: B**

**NEW QUESTION: 4**

Under the AWS shared responsibility model, customers are responsible for which aspects of security in the cloud? (Choose two.)

- A. Visualization management
- B. Facilities management
- C. Encryption management
- D. Hardware management
- E. Firewall management

With the basic Cloud infrastructure secured and maintained by AWS, the responsibility for what goes into the cloud falls on you. This covers both client and server side encryption and network traffic protection, security of the operating system, network, and firewall configuration, followed by application security and identity and access management.

Firewall configuration remains the responsibility of the end user, which integrates at the platform and application management level. For example, RDS utilizes security groups, which you would be responsible for configuring and implementing.

**Answer: C,E**
