Answer: B

Explanation:

The load balancer sends a health check request to each registered target every HealthCheckIntervalSeconds seconds, using the specified port, protocol, and ping path.
<https://docs.aws.amazon.com/elasticloadbalancing/latest/application/target-group-health-checks.html>

NEW QUESTION: 3

HOTSPOT

Your network contains an Active Directory domain named adatum.com. You create an account for a temporary employee named User1. You need to ensure that User1 can log on to the domain only between 08:00 and 18:00 from a client computer named Computer1. From which tab should you perform the configuration? To answer, select the appropriate tab in the answer area. Hot Area:

Answer:

Explanation:

Explanation/Reference:

Explanation:

The User account properties contains the Logon Hours settings that you can use to change the hours that this selected object can log on to the domain. By default, domain logon is allowed 24 hours a day, 7 days a week. Note that this control does not affect the user's ability to log on locally to a computer using a local computer account instead of a domain account.

- To set logon hours
1. Open Active Directory Users and Computers.
 2. In the console tree, click Users.

Where?

Active Directory Users and Computers/domain

node/Users Or, click the folder that contains the user account.
3. Right-click the user account, and then click Properties.
4. On the Account tab, click Logon Hours, and then set the permitted or denied logon hours for the user.
