NEW QUESTION: 1

You are configuring the Retail catalog approval workflow. For which three types of events can you configure notifications? Each correct answer presents a complete solution.

- A. document change requests
- B. canceled events
- C. document rejections
- D. document delegation requests
- E. documents assigned for approval

Answer: A,C,D

NEW QUESTION: 2

Foil used as a detector on a glass window to signal a surreptitious or forcible entry is an example of a(n):

- A. Microwave sensor
- B. Acoustic sensor
- C. Capacitance sensor
- D. Vibration sensor
- E. Electromechanical sensor

Answer: E

NEW QUESTION: 3

A user has created an Auto Scaling group using CLI. The user wants to enable CloudWatch detailed monitoring for that group. How can the user configure this?

- A. By default detailed monitoring is enabled for Auto Scaling
- B. Enable detail monitoring from the AWS console
- C. Auto Scaling does not support detailed monitoring
- D. When the user sets an alarm on the Auto Scaling group, it automatically enables detail monitoring

Answer: A

Explanation:

CloudWatch is used to monitor AWS as well as the custom services. It provides either basic or detailed monitoring for the supported AWS products. In basic monitoring, a service sends data points to CloudWatch every five minutes, while in detailed monitoring a service sends data points to CloudWatch every minute. To enable detailed instance monitoring for a new Auto Scaling group, the user does not need to take any extra steps. When the user creates an Auto Scaling launch config as the first step for creating an Auto Scaling group, each launch configuration contains a flag named InstanceMonitoring.Enabled. The default value of this flag is true. Thus, the user does not need to set this flag if he wants detailed monitoring.
