Free PDF Quiz 2021 Pegasystems Useful PEGAPCSA86V1 Visual Cert Test

These questions and answers provide you with the experience of taking the actual test, We know how expensive it is to take Pega Certified System Architect (PCSA) 86V1 (exam code: PEGAPCSA86V1) exam.

You will successfully install the PEGAPCSA86V1 actual torrent: Pega Certified System Architect (PCSA) 86V1 in one minute, What is more, we will send you the follow-up Pegasystems PEGAPCSA86V1 valid practice torrent once it comes out.

Online customer service for anytime, Actually, gaining the PEGAPCSA86V1 certification can bring about considerable benefits, If you have no time to prepare the exam, our PEGAPCSA86V1 Pass4sure Pdf materials will reduce the burden of your memory and save much of your time.

And you can get the according PEGAPCSA86V1 certification as well, We provide you the latest PEGAPCSA86V1 valid training pdf for exam preparation and also the valid study guide for the organized review.

Updated Cheat Sheet Pegasystems PEGAPCSA86V1 Dumps ~ Instant Download, Will you feel nervous in the exam, In addition, the passing rate of our PEGAPCSA86V1 study materials is very high, and we are very confident to ensure your success.

Pass Guaranteed 2021 Trustable Pegasystems PEGAPCSA86V1: Pega Certified System Architect (PCSA) 86V1 Visual Cert Test There are so many striking points of our PEGAPCSA86V1 preparation exam, (Pega Certified System Architect (PCSA) 86V1 test for engine) 2, Our study guide can release your stress of preparation for the test.

If you are in desperate need to acquire the certificate, if you want to increase your efficiency, PEGAPCSA86V1 exam question is the best choice, They do not want to waste too much time and money any more.

Many candidates may be afraid that if our PEGAPCSA86V1 pass4sure torrent are certainly valid and if we are a company in good faith, The APP online version of the PEGAPCSA86V1 exam questions can provide you with exam simulation.

#### **NEW QUESTION: 1**

You need to recommend a strategy for the web tier of WebApp1. The solution must minimize What should you recommend?

- A.** Configure the Scale Up settings for a web app.
- B.** Configure the Scale Out settings for a web app.
- C.** Deploy a virtual machine scale set that scales out on a 75 percent CPU threshold.
- D.** Create a runbook that resizes virtual machines automatically to a smaller size outside of business hours.

#### **Answer: B**

Explanation:

Topic 2, Contoso, Ltd

Overview

Contoso, Ltd is a US-base finance service company that has a main office New York and an office in San Francisco.

Payment Processing Query System

Contoso hosts a business critical payment processing system in its New York data center. The system has three tiers a front-end web app a middle -tier API and a back end data store implemented as a Microsoft SQL Server 2014 database All servers run Windows Server 2012 R2.

The front -end and middle net components are hosted by using Microsoft Internet Inform-non Services (IK) The application rode is written in C# and middle- tier API uses the Entity framework to communicate the SQL Server database. Maintenance of the database e performed by using SQL Server Ago- The

database is currently J IB and is not expected to grow beyond 3 TB.

The payment processing system has the following compliance related requirement

- \* Encrypt data in transit and at rest. Only the front-end and middle-tier components must be able to access the encryption keys that protect the data store.
- \* Keep backups of the two separate physical locations that are at least 200 miles apart and can be restored for up to seven years.
- \* Support blocking inbound and outbound traffic based on the source IP address, the destination IP address, and the port number
- \* Collect Windows security logs from all the middle-tier servers and retain the log for a period of seven years,
- \* Inspect inbound and outbound traffic from the front-end tier by using highly available network appliances.
- \* Only allow all access to all the tiers from the internal network of Contoso.

Tape backups are configured by using an on-premises deployment of Microsoft System Center Data Protection Manager (DPM) and then shipped offsite for long term storage. Historical Transaction Query System Contoso recently migrated a business-critical workload to Azure. The workload contains a .NET web server for querying the historical transaction data residing in Azure Table Storage. The .NET service is accessible from a client app that was developed in-house and on the client computer in the New York office. The data in the storage is 50 GB and is not expected to increase.

#### Information Security Requirement

The IT security team wants to ensure that identity management is performed by using Active Directory. Password hashes must be stored on premises only.

Access to all business-critical systems must rely on Active Directory credentials. Any suspicious authentication attempts must trigger multi-factor authentication prompts automatically. Legitimate users must be able to authenticate successfully by using multi-factor authentication.

#### Planned Changes

Contoso plans to implement the following changes:

- \* Migrate the payment processing system to Azure.
- \* Migrate the historical transaction data to Azure Cosmos DB to address the performance issues.

#### Migration Requirements

Contoso identifies the following general migration requirements:

Infrastructure services must remain available if a region or a data center fails. Failover must occur without any administrative intervention

- \* Whenever possible, Azure managed services must be used to minimize management overhead
- \* Whenever possible, costs must be minimized.

Contoso identifies the following requirements for the payment

processing system:

- \* If a data center fails, ensure that the payment processing system remains available without any administrative intervention. The middle-tier and the web front end must continue to operate without any additional configurations-
- \* If that the number of compute nodes of the front-end and the middle tiers of the payment processing system can increase or decrease automatically based on CPU utilization.
- \* Ensure that each tier of the payment processing system is subject to a Service level Agreement (SLA) of 99.99 percent availability
- \* Minimize the effort required to modify the middle tier API and the back-end tier of the payment processing system.
- \* Generate alerts when unauthorized login attempts occur on the middle-tier virtual machines.
- \* Ensure that the payment processing system preserves its current compliance status.
- \* Host the middle tier of the payment processing system on a virtual machine.

Contoso identifies the following requirements for the historical transaction query system:

- \* Minimize the use of on-premises infrastructure service.
- \* Minimize the effort required to modify the .NET web service querying Azure Cosmos DB.
- \* If a region fails, ensure that the historical transaction query system remains available without any administrative intervention.

Current Issue

The Contoso IT team discovers poor performance of the historical transaction query as the queries frequently cause table scans.

Information Security Requirements

The IT security team wants to ensure that identity management is performed by using Active Directory. Password hashes must be stored on-premises only.

Access to all business-critical systems must rely on Active Directory credentials. Any suspicious authentication attempts must trigger a multi-factor authentication prompt automatically. Legitimate users must be able to authenticate successfully by using multi-factor authentication.

## **NEW QUESTION: 2**

You have two IP Appliances: one IP565 and one IP395. Both appliances have IPSO 6.2 and R76 installed in a distributed deployment. Can they be members of a Gateway Cluster?

- A.** No, because the Security Gateways must be installed in a stand-alone installation.
- B.** No, because IP does not have a cluster option.
- C.** No, because the appliances must be of the same model (both should be IP565 or IP395).
- D.** Yes, as long as they have the same IPSO and Check Point

versions.

**Answer: D**

**NEW QUESTION: 3**

Assume an intruder has compromised your current IKE Phase 1 and Phase 2 keys.

Which of the following options will end the intruder's access, after the next Phase 2 exchange occurs?

- A. Perfect Forward Secrecy
- B. Phase 3 Key Revocation
- C. MD5 Hash Completion
- D. SHA1 Hash Completion
- E. DES Key Reset

**Answer: A**

**NEW QUESTION: 4**

In dotted decimal notation, what is the equivalent of 1101010101000010 01111111 11000010?

- A. 213.66.127.194
- B. 213.66.111.194
- C. 212.64.143.194
- D. 214.66.128.195

**Answer: A**
